Summary

I have **9 months of experience** as a **Python Developer**, primarily working with **Django** and **Django REST Framework (DRF)**. I have worked on **scalable backend systems** using **microservices architecture** and **API Gateway** concepts. Currently focused on deepening my backend development expertise and exploring new technologies. I also have basic knowledge of **Git** and **Docker**, and I'm actively improving in both areas.

Experience

Ideal It Techno Pvt. Ltd | Dec 2024 – March 2025

Project – Taskeasy(Service Marketplace Platform) 

Tech Stack – Python, Django, DRF

- **Developed and maintained scalable RESTful APIs using Django and Django REST Framework**, implementing class-based views, viewsets, custom permissions, and serializers to manage tasks, contractors, and role-based user access.
- **Integrated JWT authentication** to secure APIs with role-based access control, token validation middleware, and refresh/blacklist mechanisms, ensuring protected and reliable user session management.
- **Used Swagger (drf-yasg) to generate interactive API documentation**, improving developer collaboration and API testability; also created custom response wrappers and error handlers for standardized outputs.
- **Followed a CI/CD workflow using Git (Bitbucket) and Bitbucket Pipelines**, with automated testing and deployment; built reusable Python utility libraries for logging, notifications, and task calculations to keep the codebase modular and clean.

Insta Dot Analytics | Aug 2023 – Jan 2024

Project – Taxi Booking (like Uber) 

Tech Stack – Python, Django, Razorpay

- **Built a complete taxi booking system using Python and Django**, including user and driver registration/login, profile management, and secure authentication with session and token-based login flows.
- Integrated real-time ride booking features **such as driver availability, booking requests, ride status updates (Pending, Accepted, On-Trip, Completed), and dynamic fare calculation based on distance.**
- **Implemented a dual payment system** using both **online payment gateway (Razorpay)** and **Cash on Delivery**, with secure transaction handling, booking history tracking, and payment verification logic.
- **Designed a scalable and modular backend architecture**, ensuring role-based access control, reusable views and models, and clean separation between customer and driver workflows, along with admin ride monitoring.

Personal Project

Project – Bookstore Management System (API-Based) 

Tech Stack – Python, Django, DRF, JWT Auth, SQLite/Mysql, Swagger

- Built a scalable RESTful bookstore backend with **CRUD operations** for User, Author, Category, and Book models, using Django and DRF.
- Integrated **JWT authentication, pagination, and search/filter functionality**, enhancing secure and efficient data access
- Documented and tested APIs with **Swagger**, ensuring clean API visibility and easy integration for frontend or mobile clients.

Project – Image Uploader (CRUD) 

Tech Stack – Python, Django, Bootstrap

- Built a secure Django image uploader with CRUD, authentication, role-based admin control, and a responsive Bootstrap gallery.

SKILLS

Languages

- Python

Frontend

- HTML
- CSS
- JavaScript
- Bootstrap

Databases

MySQL

Frameworks

- Django
- Flask
- DRF

Tools & Platforms

- Git
- GitHub
- VS Code

Soft Skills

- Problem-Solving
- Creative Thinking
- Result-Oriented
- Adaptability
- Customer Focus

ACADEMICS

MCA – Computer Application

SAGE University, Indore | 2021 - 2023

B.Sc. – Computer Science

A.P.S. University, Rewa | 2017 - 2020

LANGUAGES

- Hindi
- English
